NSFR

The CBB's Net Stable Funding Ratio (NSFR) regulations became effective on 31 December 2019. The primary objective of the NSFR is to strengthen banks' liquidity resilience over a longer-term horizon by promoting a stable funding profile relative to their assets and off-balance sheet activities. The NSFR is designed to reduce banks' reliance on short-term wholesale funding and encourage a more sustainable funding structure. It also promotes a comprehensive assessment of funding risks across both on-balance sheet and off-balance sheet exposures, thereby reducing the likelihood that disruptions to a bank's regular funding sources could materially weaken its liquidity position, increase the risk of failure, or contribute to broader systemic stress. Under the CBB NSFR regulations, banks are required to maintain an NSFR of at least 100% on an ongoing basis. However, pursuant to CBB Circular EDS/NA/01/2026 dated 14 April 2026, the minimum NSFR requirement was temporarily reduced to 80% for a period of six months as part of the Liquidity Support Program launched by the CBB.

The below table provides information on Khaleeji's Consolidated NSFR as at 30th September 2026:

LCR

In August 2018, the Central Bank of Bahrain (CBB) issued its Liquidity Risk Management (LM) regulations, which, among other requirements, mandated banks to implement the Liquidity Coverage Ratio (LCR) by the end of June 2019. The primary objective of the LCR is to strengthen banks' short-term liquidity resilience by ensuring that they maintain a sufficient stock of High-Quality Liquid Assets (HQLA) to meet net cash outflows and withstand a significant liquidity stress scenario over a period of up to 30 days. Under the CBB LM regulations, banks are required to maintain a minimum LCR of 100% on a daily basis. However, pursuant to CBB Circular EDS/NA/01/2026 dated 14 April 2026, the minimum LCR requirement was temporarily reduced to 80% for a period of six months as part of the Liquidity Support Program launched by the CBB.

The Bank's average LCR for the the nine-month period ended 30 September 2026 remained above the regulatory minimum requirement . As the LCR is measured daily, it is subject to fluctuations arising from the timing of cash flows and normal business and funding activities. The ratio was below the regulatory minimum requirement on a limited number of days during the reporting period.

The below table provides information on Khaleeji's Consolidated LCR for the the nine-month period ended 30 September 2026:
